Section 1: The Building Blocks of Music—Scales and Intervals

Types of Measurement Scales

Nominal Scale

It's used to label variables without any quantitative value or rank.

Ordinal Scale

It's used to represent ordinal numerical data such as frequency, satisfaction, happiness, or degree of pain, etc.

Interval Scale

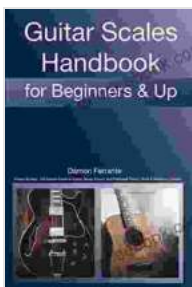

It's different from ordinal scale where order of the variables is not important. Difference between these variables is important.

Example: Temperature

Ratio Scale

It's a variable measurement scale that not only produces the order of the variables, but also allows the difference between the observations along with information about the value of the first zero.
