In March 2020, Cheryl Bradley, a 23-year-old woman from New York City, was diagnosed with COVID-19. She was one of the first young people in the United States to be hospitalized with the virus. Cheryl spent 100 days in the hospital, including 60 days on a ventilator. After being discharged from the hospital, she continued to experience debilitating symptoms, including fatigue, shortness of breath, and brain fog.

Cheryl's story is a reminder of the devastating impact that COVID-19 can have on young people. It also highlights the importance of getting vaccinated and taking precautions to protect yourself from the virus.

## Cheryl's Symptoms

Cheryl's symptoms began with a fever and cough. She also experienced shortness of breath and fatigue. Within a few days, her symptoms

worsened and she was admitted to the hospital. Cheryl's condition rapidly deteriorated and she was soon placed on a ventilator.

Cheryl spent 60 days on a ventilator. During this time, she was in a coma. When she woke up, she was weak and confused. She had lost a significant amount of weight and muscle mass. Cheryl also had difficulty breathing and speaking.

After being discharged from the hospital, Cheryl continued to experience debilitating symptoms. She was fatigued and short of breath. She also had difficulty concentrating and remembering things. Cheryl's symptoms gradually improved over time, but she still experiences some fatigue and brain fog.

## **Cheryl's Recovery**

Cheryl's recovery has been a long and difficult process. She has had to relearn how to walk, talk, and eat. She has also had to deal with the emotional and psychological effects of her illness.

Cheryl has received support from her family, friends, and medical team. She has also found comfort in connecting with other COVID-19 survivors. Cheryl is now an advocate for COVID-19 awareness and prevention.

## **The Importance of Vaccination**

Cheryl's story is a reminder of the importance of getting vaccinated against COVID-19. Vaccination is the best way to protect yourself from the virus and its potentially devastating effects. COVID-19 vaccines are safe and effective. They have been shown to reduce the risk of severe illness, hospitalization, and death.

If you are not vaccinated, please get vaccinated as soon as possible. Vaccination is the best way to protect yourself and your loved ones from COVID-19.
